CO (II), NI (II) VA CU (II) TUZLARI BILAN 3-AMINO-1,2,4-TRIAZOLNING KOMPLEKS BIRIKMALARINI SINTEZI VA TADQIQOTI

Аннотация

3-Amino-1,2,4-triazolning Co (II), Ni (II) va Cu (II) tuzlari bilan kompleks birikmalarini sintez usullari ishlab chiqildi, hamda sintez qilingan kompleks birikmalarining tarkibi, tuzilishi zamonaviy fizik-kimyoviy usullar yordamida o'rganildi. Ligand 3-amino-1,2,4-triazol kompleks hosil bo'lish reaksiyalarida triazol halqasidagi to'rtinchi azot atomi orqali koordinatsiyaga uchrashi aniqlandi.

Kalit so'z: Amitrol, nikel sulat, infraqizil spektroskopiya, kompleks, eruvchanlik, ligand, termik analiz.

СИНТЕЗ И ИССЛЕДОВАНИЕ КОМПЛЕКСНЫХ СОЕДИНЕНИЙ 3-АМИНО-1,2,4-ТРИАЗОЛА С СОЛЯМИ Co (II), Ni (II) И Cu (II)

Аннотация

Разработаны методы синтеза комплексных соединений 3-амино-1,2,4-триазола с солями Co (II), Ni (II) и Cu (II), изучены состав и строение синтезированных комплексных соединений с использованием современных физико-химических методов исследования. Установлено, что в реакциях комплексообразования лиганд 3-амино-1,2,4-триазол координируется через четвертый атом азота триазольного кольца.

Ключевые слова: Амитрол, сульфат никеля, ИК-спектроскопия, комплекс, растворимость, лиганд, термический анализ.

SYNTHESIS AND STUDY OF COMPLEX COMPOUNDS OF 3-AMINO-1,2,4-TRIAZOLE WITH SALTS OF Co (II), Ni (II) AND Cu (II)

Annotation

Methods for the synthesis of complex compounds of 3-amino-1,2,4-triazole with Co (II), Ni (II) and Cu (II) salts have been developed, and the composition and structure of the synthesized complex compounds have been studied using modern physicochemical research methods. It was established that in complex formation reactions the 3-amino-1,2,4-triazole ligand is coordinated through the fourth nitrogen atom of the triazole ring.

Key words: Amitrol, nickel sulfate, infrared spectroscopy, complex, solubility, ligand, thermal analysis.

Kirish. Ma'lumki tarkibida azot tutgan geterosiklik birikmalar ichidan triazol hosilalari tibbiyotda, qishloq xo'jaligida, kimyoviy texnologiya, farmatsevtika va analitik kimyo sohalarida keng qo'llanilib kelinmoqda. 1,2,4-Triazol hosilalari qishloq xo'jaligida fungitsidlar va gerbitsidlar sifatida [1], tibbiyotda antimikotiklar sifatida keng qo'llaniladi. Masalan, antimikotik vorikinazol eng ko'p sotiladigan 200 ta dori qatoriga kiradi [2]. Uning tarkibida faol fragment sifatida 1,2,4-triazol geterohalqasi mavjudligi bilan katta ahamiyatga egadir.

3-Amino-1,2,4-triazol va uning hosilalari, shuningdek, dorivor moddalar va agrokimyo sohalarida ham keng qo'llaniladi. Masalan, 3-aminotriazol hosilalari katalaza [3] va gistidin [4] biosintezining ingibitorlari hisoblanadi. Shuningdek, aminotriazol hosilalari neyropeptid Y retseptorlari va kuchli CRF1 retseptorlari antagonistlari [5], hamda metionin aminopeptidaza-2 fermentlarining ingibitorlari [7] sifatida qo'llanilib kelinmoqda.

Adabiyot ma'lumotlari tahlili shuni ko'rsatadiki, koordinatsion birikmalarning ligandlari sifatida 3-amino-1,2,4-triazol asosidagi geterohalqali birikmalar yetarlicha o'rganilmagan. Shu sababli, 3-amino-1,2,4-triazol hosilalarining xossalari, tuzilishini va ulardan yangi moddalarni sintez qilish usullarini ishlab chiqish amaliy va nazariy jihatdan ahamiyatlidir.

Tajriba qismi. 3-amino-1,2,4-triazolning Co (II), Ni (II) va Cu (II) tuzlari bilan komplekslarini sintezi; 0.002 mol amitrol etanolida eritilib, magnitli mishalkada aralashtirildi. Unga 0.001 mol Co (II), Ni (II) va Cu (II) tuzlarining suvli (issiq) eritmasi tomchilatib qo'shildi va 3 soat davomida xona haroratida aralashtirildi. Xona haroratida sovugan aralashma filtrlandi va kristallanish uchun qoldirildi. Erituvchining bir necha kun davomida asta-sekin bug'lanishi natijasida rangli kristallar hosil bo'ldi. Hosil bo'lgan kristallar suvda va etanolida eridi, qutubsiz erituvchilarda erimadi.

Kompleks birikmalarning suyuqlanish temperaturasi qiymatlari hamda element tahlil natijalari 1-jadvalda keltirilgan.

Sintez qilib olingan kompleks birikmlarning IQ spektr taxlili. Ligandning markaziy atom bilan koordinatsiya markazlarini aniqlash maqsadida sintez qilingan kompleks birikmlarning IQ-spektrlari o'rganildi. C=N bog'i to'yingan va to'yinmagan, ochiq va yopiq halqali birikmalar tarkibida uchrashiga qarab 1450-1850 sm⁻¹ sohada yutilish hosil qiladi [8]. Ligand 3-amino-1,2,4-triazolning IQ-spektrida 1537, 1560 sm⁻¹ sohalarida $\nu(\text{C}=\text{N})$ guruhining valent tebranishlarga tegishli yutilish chiziqlari namoyon bo'ldi. Kompleks birikmalarda $\nu_{\text{as}}(\text{C}=\text{N})$, $\nu_{\text{s}}(\text{C}=\text{N})$, $\nu(\text{NH}_2)$ funksional guruhlarining simmetrik va assimetrik valent tebranishlariga tegishli bo'lgan yutilish sohalarida ligandnikiga nisbatan o'zgarishlar kuzatildi (1-jadval). 3-Amino-1,2,4-triazolning metal atomiga koordinatsiyalanishi natijasida $\nu_{\text{as}}(\text{C}=\text{N})$, $\nu_{\text{s}}(\text{C}=\text{N})$ guruhlarining xarakteristik chiziqlarida 10 sm⁻¹ gacha farq bilan siljishi kuzatildi. Kompleks birikmalarda ligand spektrida ko'zatilgan $\nu(\text{M}-\text{N})$ bog'larining tebranishiga tegishli bo'lgan 474, 495, 475, 490 va 425 sm⁻¹ sohalarida yangi yutilish chiziqlarining hosil bo'lishi, triazol halqasidagi to'rtinchi azot atomi orqali koordinatsiyaga uchraganligini ko'rsatadi. 3-amino-1,2,4-triazol bilan kvant-kimyoviy hisoblashlar natijasi, metal atomi liganddagi to'rtinchi azot atomi orqali koordinatsiyaga uchrashi to'g'risidagi nazariy ehtimollik qilingan. Ligandning metall ionlariga koordinatsiyaga uchrashi halqadagi to'rtinchi azot atomi orqali amalga oshishi tasdiqlandi. Birikmalar IQ-spektrlarining taxlil natijalari 2- jadvalda keltirilgan:

Moddalarining termik taxlili natijalari. Sintez qilingan koordinatsion birikmalarining tarkibi va tuzilishini o'rganish ularning termogravigrammalarini olish bilan to'ldirildi. Termik analiz natijalarida issiqlik effektlari tabiati, birikmalarining termik parchalanishini kuzatilishi, effektlarning temperature intervali va uning tabiati, xuddi shunday effekt intervalidagi prosentlardagi massa yo'qotilishi keltirilgan. Termik analiz natijasida kompleksning parchalanishini va suyuqlanishini, ligandning koordinatsiyalanishi, komplekslarning termoliz jarayonidagi oxirgi mahsulotlar aniqlandi (3-jadval).

Sintez qilib olingan $[\text{Ni}(\text{C}_2\text{N}_4\text{H}_4)_6]\text{SO}_4$ kompleks birikmasining termik tahlili 20°C dan 1000°C gacha bo'lgan harorat oralig'ida amalga oshirildi (4A-rasm). Umumiy parchalanish $50\text{--}780^\circ\text{C}$ oralig'larida kuzatildi. Dastlab $50\text{--}225^\circ\text{C}$ oralig'ida 0,591 mg, ya'ni 16,174 % massa yo'qotilganligi va endotermik effekt kuzatildi. Intensiv massa yo'qotilishi $230\text{--}515^\circ\text{C}$ oralig'ida 0,988 mg, ya'ni 27,067 % ni tashkil etdi va ekzotermik effekt kuzatildi. $560\text{--}780^\circ\text{C}$ da sintez qilingan komplekslarning termogravigrammalariga oxirgi ta'sirlar metall oksidlarining hosil bo'lishi bilan bog'liq. Bu oraliqda parchalanishning miqdori, parchalanishning 31,128% ya'ni 1,137 mg tashkil qildi. 780°C dan keyin o'zgarish kuzatilmadi. Termik analiz natijalariga ko'ra, kompleks birikmalar tarkibida suv molekullari yo'qligi va metal oksidi qolganligi aniqlandi [9].

Sintez qilib olingan $[\text{Ni}(\text{L})_4\text{Cl}_2]\cdot (\text{H}_2\text{O})_2$ kompleks birikmasining termik analizi 20°C dan 1000°C gacha bo'lgan harorat oralig'ida amalga oshirildi (4B-rasm). Umumiy parchalanish $50\text{--}780^\circ\text{C}$ bo'lgan oraliklarda kuzatildi. Dastlab $40\text{--}230^\circ\text{C}$ oralig'ida 1,329 mg, ya'ni 14,155 % massa yo'qotilganligi va ekzotermik effekt kuzatildi. Bundan kompleks birikma tarkibida suv molekullarining borligi aniqlandi. Intensiv massa yo'qotilishi $230\text{--}470^\circ\text{C}$ oralig'ida 1,687 mg, ya'ni 17,966 % ni tashkil etdi va ekzotermik effekt kuzatildi. $470\text{--}880^\circ\text{C}$ da o'rganilayotgan kompleksning termogravigrammasidagi oxirgi ta'sirlar metall oksidining hosil bo'lganligini ko'rsatdi. Bu oraliqda parchalanishning miqdori 46,363% ya'ni 4,354 mg. 880°C dan keyin o'zgarish kuzatilmadi.

4 – rasm: $[\text{Ni}(\text{C}_2\text{N}_4\text{H}_4)_6]\text{SO}_4$ (A) va $[\text{Ni}(\text{C}_2\text{N}_4\text{H}_4)_4\text{Cl}_2](\text{H}_2\text{O})_2$ (B) kompleks birikmalarining termogrammasi

Sintez qilib olingan $[\text{Co}(\text{C}_2\text{N}_4\text{H}_4)_2(\text{NO}_3)_2(\text{H}_2\text{O})_2]$ kompleks birikmasining termik analizi 20°C dan 1000°C gacha bo'lgan harorat oralig'ida amalga oshirildi (5A-rasm). Umumiy parchalanish $40\text{--}875^\circ\text{C}$ bo'lgan oraliqlarda kuzatildi. Dastlab $50\text{--}250^\circ\text{C}$ oralig'ida $0,179$ mg, ya'ni $2,735\%$ massa yo'qotilgan va endotermik effekt kuzatildi. Bu massa miqdori kompleks birikma tarkibida suv molekularining borligini ko'rsatdi. Intensiv massa yo'qotilishiga to'g'ri kelgan ekzotermik effekt kuzatildi. Intensiv massa yo'qotilishi $365\text{--}580^\circ\text{C}$ oralig'ida $5,580$ mg, ya'ni $85,069\%$ ni tashkil etdi va ekzotermik effekt kuzatildi. $580\text{--}875^\circ\text{C}$ da sintez qilingan kompleksning termogravigrammasidagi oxirgi effekt metall oksidining hosil bo'lishi bilan bog'liq. Bu oraliqda parchalanishning miqdori, parchalanishning $8,382\%$ ni, ya'ni $0,550$ mg to'g'ri keldi. 875°C dan keyin o'zgarish kuzatilmadi. Termoliz natijasida ohirgi mahsulot sifatida metal oksidi qolganligi aniqlandi.

Sintez qilib olingan $[\text{Ni}(\text{C}_2\text{N}_4\text{H}_4)_2(\text{CH}_3\text{COO})_2]$ kompleks birikmasining termik tahlili ham 20°C dan 1000°C gacha bo'lgan harorat oralig'ida amalga oshirildi (5B-rasm). Umumiy parchalanish $40\text{--}790^\circ\text{C}$ bo'lgan oraliqlarda kuzatildi. Dastlab $40\text{--}180^\circ\text{C}$ oralig'ida $0,450$ mg, ya'ni $11,608\%$ massa yo'qotilishiga to'g'ri kelgan ekzotermik effekt kuzatildi. Intensiv massa yo'qotilishi $325\text{--}520^\circ\text{C}$ oralig'ida ekzotermik effekt shaklida $0,796$ mg, ya'ni $20,537\%$ ni tashkil etdi. $520\text{--}880^\circ\text{C}$ da oralig'idagi oxirgi ta'sirlar metall oksidining hosil bo'lishi bilan bog'liq. Bu oraliqda parchalanishning miqdori $25,392\%$ ni, ya'ni $0,984$ mg ni tashkil qildi. 880°C dan keyin o'zgarish kuzatilmadi.

5 – rasm: $[\text{Co}(\text{C}_2\text{N}_4\text{H}_4)_2(\text{NO}_3)_2(\text{H}_2\text{O})_2]$ (A) va $[\text{Ni}(\text{C}_2\text{N}_4\text{H}_4)_2(\text{CH}_3\text{COO})_2]$ (B) kompleks birikmalarining termogrammasi

Hosil bo'lgan komplekslarni SEM yordamida o'rganish.

Yangi hosil qilingan komplekslarni skanerlovchi elektron mikroskop (SEM) yordamida o'rganildi (6,7-rasm). Tahlil natijasida hosil bo'lgan kompleks birikmalardagi uglerod, kislorod, azot va metallarning miqdorlari aniqlandi. SEM natijasida olingan ma'lumotlar asosida ligand bilan metall ionlarining koordinatsiyalanishi tufayli ligandlar mikrostrukturasi o'zgarishi kuzatildi. Ko'plab metall cho'qqilar qayd qilishi orqali kompleks hosil bo'lganligi isbotlandi.

Sintez qilingan ligand va komplekslardagi elementlarning miqdorlari SEM-ED metodi yordamida analiz qilindi. Analizdan olingan ma'lumotlarda kompleks tarkibidagi elementlar massalarining foiz nisbati aniqlandi. Bu esa komplekslarning brutto formulasini keltirib chiqarish imkonini berdi. Keltirilgan formulalarga asosan komplekslarning tarkibi aniqlandi.

Tadqiqot natijalari asosida olingan kompleks birikmalarning taklif qilingan tuzilishlari

Xulosa. 3-Amino-1,2,4-triazolning Ni (II), Cu (II) va Co (II) tuzlari bilan komplekslarini sintez qilish usuli ishlab chiqildi va suvda yaxshi eriydigan kompleks birikmalar olindi. O'tkazilgan fizik-kimyoviy tadqiqot natijalari asosida sintez qilingan kompleks birikmalarda metall ioni ligand molekulasida bilan triazol halqasidagi to'rtinchi azot atomi orqali koordinatsiyaga uchraganligi aniqlandi. Sintez qilingan kompleks birikmalar tarkibi va tuzilishining element, termik, skanerlovchi elektron mikroskop hamda IQ-spektroskopik tahlil natijalariga asosan komplekslar tarkibi $[\text{Ni}(\text{C}_2\text{N}_4\text{H}_4)_6]\text{SO}_4$, $\text{Cu}(\text{C}_2\text{N}_4\text{H}_4)_5\text{Cl}_2$, $[\text{Ni}(\text{C}_2\text{N}_4\text{H}_4)_2(\text{CH}_3\text{COO})_2]$, $[\text{Co}(\text{C}_2\text{N}_4\text{H}_4)_2(\text{NO}_3)_2](\text{H}_2\text{O})_2$ va $[\text{Ni}(\text{C}_2\text{N}_4\text{H}_4)_4\text{Cl}_2]2\text{H}_2\text{O}$ formulalarga to'g'ri kelishi aniqlandi.
